REASONS FOR ALLOWANCE

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in claim(s) 1-11, wherein the claimed invention comprises a lens frame to which a lens group is fixed, at least one movable annular member, a light shield member being supported by the movable annular member while restricting a rearward movement limit of the light shield member relative to the movable annular member, and a biasing member which is positioned between the light shield member and the lens frame in a compressed fashion to bias the light shield member toward the rearward movement limit thereof relative to the movable annular member, as claimed. The combination of all the claimed features are not anticipated or made obvious by the prior art and all of said features are relied upon for a determination of allowability.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references are cited for being related references (inventive entity

and/or assignee) which disclose the same/similar structure but does not claim the same invention and are not prior art: Nomura et al. (20040156122, 20040156123, 20040156127, 20040160679, 20040160683). The following references are cited for disclosing a lens barrel having light limited means and other related structure, but the references do not disclose a lens frame to which a lens group is fixed, at least one movable annular member, a light shield member being supported by the movable annular member while restricting a rearward movement limit of the light shield member relative to the movable annular member, and a biasing member which is positioned between the light shield member and the lens frame in a compressed fashion to bias the light shield member toward the rearward movement limit thereof relative to the movable annular member, as claimed: Iwasa (6256458), Takanashi et al. (6324019) and Yasutomi et al. (20040228006).
